

# MATCH LINE AND SPEED

## Increase your speed control and adaptability to various speeds

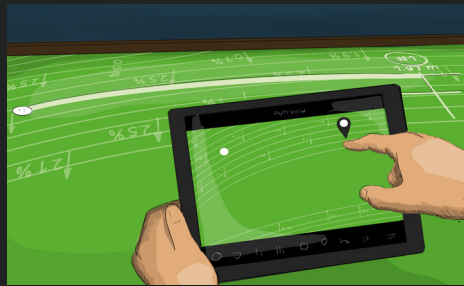

Knowing how to improve on your speed control is very important for any golfer. But it is not just about

being able to hit the same speed every time, it is also about being able to match speed to different lines.

Check out this drill to improve on your speed control.

**1** To start this drill, locate the biggest break on the green by showing the Contour Lines and Slope Percentage on the green.

**2** Then chose a starting position which gives you a putt through that slope.

**3** Activate the Speed Corridor feature on the tablet.

**4** Take a ball and try to locate the broadest part of the speed corridor. Place the ball in the middle of this spot.

**5** Start by aligning yourself to the highest line and try to putt the ball above the ball. Try to see if this speed feels comfortable to you or not.

**6** Now try the same thing by aligning yourself to the lower line and putt the ball below the ball. This drill gives you a feel for the speed and your own speed tendency.

You can try this drill on various putts and see for yourself which speed feels good to you. The Speed Corridor gives you any possible speed and line option there is for your chosen putt. If you are not on a PuttView green, you can try and find a breaking putt on a green and simply try to putt the same putt on various lines and speeds. Make sure to mark your lines with a tee or something similar.
